Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Ohno et al, the closest prior art of record, teaches the combination of erythritol and mannitol wherein mannitol has the instant particle size but erythritol does not have a particle size of less than 100 microns. Thus, the instant invention is distinguishable over Ohno et al since the instant claims are directed a combination two polyols are selected from the groups consisting of "mannitol, xylitol, sorbitol, and maltitol wherein first polyol is a directly compressible powder with a particle diameter of 100 to 500 microns and the second polyol is a powder with a diameter of less than 100 microns. Thus, there is no motivation for a skilled artisan to substitute erythritol with the instant polyols since erythritol is a critical element in Ohno et al and also to utilize the instantly claimed particle size of less than 100 microns.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
